

SAP Business One 10.0
Web Client
Item Master data

SBO1002-EN

Table of contents

- Open “Create Item” dialog
- Create item
- Call item master data
- View, search and filter item master data list
- Analyze item master data list
- View item master
- Duplicate and remove item master data

Open „Create Item” dialog

1. The Create item dialog can be accessed via the tile on the start page or
2. the main menu or
3. via the search function in the main menu or
4. via the Enterprise Search or
5. can be called via the button NEW button in the item master data

The collage consists of four screenshots from the SAP Business One interface, each with a yellow box and a number indicating a different way to open the 'Create Item' dialog:

- 1**: A screenshot of the SAP Business One Home dashboard. The 'Create Item' tile is highlighted with a yellow box.
- 2**: A screenshot of the SAP Business One main menu. The 'Create Item' option is highlighted with a yellow box.
- 3**: A screenshot of the SAP Business One main menu search bar. The search results for 'Create Item' are highlighted with a yellow box.
- 4**: A screenshot of the SAP Business One Item Master Data screen. The 'New' button is highlighted with a yellow box.

Create item – General information

Depending on the database settings, the item number can be selected **manually** or **automatically**

The assignment to **item groups** is used in reports and valuations. The valuation, planning and procurement methods as well as the assignment to G/L accounts and discounts can be assigned to item groups.

Groups can be created for items with regard to the **units of measure**. Those groups can be applied to items using the same quantities in the purchase and sale process. For example: purchase in pallets, sale in cartons.

Images can be uploaded to the item master data.

Remarks can be applied, they are not printed in the documents. For printing purposes there is a user defined field in the conespritt template. Sales text and purchase text each in German and English (refer following slides).

Remarks:

Item types:

Items - Use the default item type to define items.

Labor - Use this option in the Service module to calculate the time required to execute a task.

Travel - Use this option in the Service module to calculate the time a service technician travels.

Information about **inventory, sales and purchase items** can be found on the following slide.

For many companies it's more applicable to maintain the **shipping type** in the business partner master.

Items can be **active** indefinitely (default setting) or be active for a certain period of time. Items that are removed from the assortment of goods can be set to inactive. An item can only be deleted as long as it has not been used in any document.

Create item – Settings for inventory, sales and purchase items

By selecting the **inventory item** option, you can use the corresponding item in the stock management. For example, inventory transactions such as stock transfers can only be performed for inventory items. If you define an item as an inventory item only, you cannot sell or buy it.

You sell a **sales item** to a customer. For example, if you have defined an item as a sales item, you can create a sales order for a customer. This category also includes services, since these are neither purchased nor kept in stock.

Purchase items are purchased from a vendor. If you have defined an item as a purchased item, you can create a purchase order, for example.

By default, an item is a combination of all three categories. However, these values change depending on the selected item type (refer to slide 4).

Stock items can be changed to non-stock items and vice versa, provided that:

- No warehouse transactions (good receipt PO, delivery and stock transfer) have been posted for the item.
- No purchasing and sales documents exist for the item, such as quotations, sales orders, purchase orders, purchase or sales down payment requests, incoming and outgoing invoices and credit memos (parked documents are also relevant)

When an **item is used in a BOM**, the setting for stock, sales and purchase items cannot be changed, even if the item has not yet been used in a document. If the setting is to be changed, the item must be taken from the BOM and then changed. It can then be added to the parts list again.

It is useful to consider the settings for stock, sales and purchase items when creating an item, because it is difficult or impossible to change these settings later.

Create item – Items overview

This overview can help to maintain article settings in SAP Business One:

	Item that is bought and sold from the warehouse	Produced Bill of Materials	Component of a Bill of Materials	Service	Drop-ship item
Inventory item	x	x	x		x*
Sales item	x	x		x	x
Purchase item	x		x		x
Sales price list	x	x		x	x
Purchase price list	x		x	x	x
Item type	Item	Item	Item	Item or work (if it is an hourly rate) or travel (if it is travel expenses)	Item
Valuation	Moving average, Fifo or standard cost	Moving average, Fifo or standard cost	Moving average, Fifo or standard cost	standard cost	Moving average, Fifo or standard cost
Inventory Data	Warehouse	Warehouse	Warehouse		Drop-ship

* It is recommended to create physical items from drop-ship business as stock items. If the items are purchased one day to your own warehouse or produced yourself, the item master record can be used for this purpose. If the check mark for stock items is not set in the item master data, a new item would have to be created.

Create item – Logistics

If the Serial number or batch option is activated, serial numbers and batches can be managed on each transaction or only on release.

On Every Transaction: with this method of serial number management, serial numbers are created and selected whenever stock is received or issued, transferred or produced.

On Release Only: With this method of serial number management, serial numbers are created and selected when stock is released, i.e. when stock is released internally or externally. Prior to this, the item is in stock virtually anonymously

A barcode can be inserted using the plus sign.

Create item – Purchasing

Manufacture Catalog numbers can be created on the Purchasing tab if the item is only purchased from a preferred supplier.

If the item is procured by several vendors, then these numbers should be maintained using the function business partner catalog number. However, this cannot be maintained with the Web Client.

The corresponding preferred vendor is entered further down in the dialog and assigned to the supplier master data using the the sign.

If you have set the UoM group to manual, you need to enter the **purchasing unit of measure** here manually. Additionally, length, width, height, volume and weight can be maintained.

By default, the **tax group** V2 (19%) is applied. If the reduced tax rate of 7% is used for the item (code V1), this must be selected manually. If the system has been set up before 1st of January 2021, it is necessary to consider how to handle the tax codes until that point in time.

Create item – Inventory

If the **G/L account** definition has been configured in Administration (using Browser Access) for the selected item group, then this field does not need to be changed. The G/L accounts can be selected based on: Warehouse, article groups or articles.

If you have set the UoM group to manual, **the stock unit of measure** must be entered here manually. Additionally, the weight can be maintained.

The following **valuation methods** are available if perpetual inventory management is activated: standard, moving average and FiFo.

The **standard valuation method** for all items can be defined in Administration (using the Browser Access). If the valuation method is different for article groups, it can also be maintained based on article group level. If the valuation standard price is chosen, the standard price must be defined by a new valuation in the Browser Access. The valuation method can only be changed when the inventory is zero.

A **default warehouse** must be assigned to each stock item.

Create item – User-defined fields

User-defined fields can be added to the fields that are available by SAP standard.

The conesprit standard already contains some user-defined fields.

In the item master data these are the fields: Sales text, purchase text in German and English. These fields are printed in the sales and purchasing documents.

The screenshot shows the 'Item Master Data' interface with the 'User-Defined Fields' tab selected. The 'General' section is active, displaying four text input fields for user-defined data:

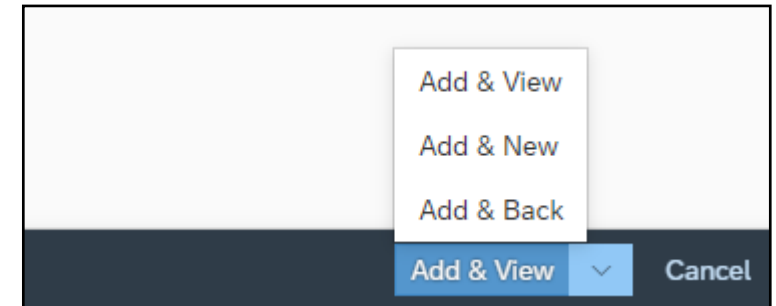

- Verkaufstext:
- Einkaufstext:
- Verkaufstext_E:
- Einkaufstext_E:

Each field is represented by a rectangular input box with a small diagonal slash icon in the bottom right corner, indicating it is a text field.

Create item – Add record

If the item master data record is complete, it can be

1. added and then immediately displayed for review
2. added and then afterwards new empty master data sheet is opened
3. added and then the previous dialog is opened

Call item master data

1. The item dialog can be opened with the tile on the start page or
2. the main menu or
3. via the search function in the main menu or
4. can be accessed with the Enterprise Search.

The screenshot displays the SAP Business One Home dashboard for user TESAT. The interface includes a top navigation bar with the SAP logo, user profile, and 'Home' label. Below this is a horizontal menu with tabs: My Home, Sales, Purchases, Business Partners, Analytics, Useful Links, and User-Defined Tables. The main area contains several tiles for various business processes, each with a count and a refresh button. The 'Items' tile is highlighted with a yellow box and a yellow '1'.

Four numbered yellow boxes indicate different ways to access the Item Master Data dialog:

- 1**: Points to the 'Items' tile in the main dashboard.
- 2**: Points to the 'Sales' menu item in the left-hand navigation menu.
- 3**: Points to the search bar in the 'Sales' menu, which has 'Items' entered and a search icon.
- 4**: Points to the search bar in the top navigation bar, which has 'Items' entered and a search icon.

The 'Items' tile (1) shows a count of 0 and a refresh button. The 'Sales' menu (2) shows a list of items with counts and refresh buttons. The search bar in the 'Sales' menu (3) shows 'Items' entered. The search bar in the top navigation bar (4) shows 'Items' entered and a search icon.

View, search and filter item master data list

The item list is opened via the item tile. Using the search (1) and the filter function (2) the item can be found quickly. By using the arrow at the end of the line (3) or a double click on the line the corresponding item master data can be opened. With the arrows in the item master data you can move between the records (4).

The screenshot displays the SAP Business One 'Manage Items' interface. At the top, there's a search bar (1) and a filter function (2). Below this is a table of items. The first row is highlighted, and a right arrow (3) is visible at the end of the row. A modal window titled 'Item Master Data A00001' is open, showing various tabs like General, Logistics, Purchasing, Sales, Inventory, Pricing, Properties, and User-Defined Fields. The 'General' tab is active, displaying basic information for item A00001, including its description 'J.B. Multifunktionsdrucker 1420' and UoM Group 'Manuell'. Navigation arrows (4) are visible at the top of the modal window.

Picture	Item No.	Item Description	Item Type	Item Group	UoM Group

Description:	J.B. Multifunktionsdrucker 1420
Foreign Name:	DRuckername in E
Item Group:	J.B. Drucker
UoM Group:	Manuell

Analyze item master data list

The article list can be analyzed using many fields (1). Line, column, bar, stacked column, pie and ring charts as well as a heat maps are available (2). If the created analysis is regularly used, it can be placed as a tile on the start page (3).

The screenshot displays the SAP Business One 'Manage Items' interface. The top navigation bar includes the SAP logo and 'Business One' text. Below the navigation bar, there are search filters for 'All Items', 'Search', 'Item No.', 'Item Description', 'Item Type' (with options: Items, Labor, Travel), and 'Item Group'. A 'Go' button is present.

On the left, a 'Save as Tile' dialog box is open, showing a preview of a tile and fields for 'Title', 'Subtitle', 'Description', and 'Group' (set to 'My Home').

The main area shows a list of items on the right and a pie chart visualization on the left. The pie chart is labeled with a yellow box '2'. The list of items includes various products like 'Rainbow Drucker 9.5 Tintenpatrone', 'Speicherkarte', 'Druckerpapier A4 weiß', etc.

Yellow arrows and boxes highlight key features:

- Box '1' points to the top right corner of the main area, indicating where to click to save the analysis as a tile.
- Box '2' points to the chart selection toolbar, indicating the available visualization options (line, column, bar, stacked column, pie, ring, heat maps).
- Box '3' points to the right side of the item list, indicating the source data for the analysis.

Logos for SAP Silver Partner and con·esprit are visible in the bottom left corner.

View item master

In addition to the information created in the item master, the item master shows the stock level (In Stock), the quantity of items committed by a sales order (Committed), the items already ordered (Ordered) and the quantity available for disposal (Available) (1).

Mathematically, the available quantity is calculated as In Stock - Committed + Ordered.

The available quantity is displayed in the article master header across all warehouses. For each warehouse, this information is displayed on the Warehouse Management tab (2).

The item costs based on the selected valuation method are also shown there (3).

Duplicate and remove item master data

To create a new item, it can be useful to duplicate the item master data of a similar item (1).

An item can only be removed (2) if it has not yet been used in a document. If it is used in a document the item can no longer be deleted, it can only be defined as inactive in the General tab.

The screenshot shows the SAP Business One 'Item Master Data' interface for item A00001. The top navigation bar includes the SAP logo and the title 'Item Master Data'. Below the title, there are buttons for 'Edit', 'New', 'Remove', 'Duplicate', and 'Create Activity'. The 'Remove' and 'Duplicate' buttons are highlighted with yellow boxes and labeled with the numbers '2' and '1' respectively. The main area displays the item's stock status: In Stock (10.619,00), Committed (3.852,00), Ordered (2.279,00), and Available (9.046,00). The description is 'J.B. Multifunktionsdrucker 1420'. At the bottom, there is a tabbed interface with tabs for General, Logistics, Purchasing, Sales, Inventory, Pricing, Properties, and User-Defined Fields.
